The figure displays two box plots side-by-side, representing the distribution of data for two distinct groups. The left box is colored red, and the right box is colored teal. Each box plot includes a central horizontal line representing the median, a box representing the interquartile range (IQR), and vertical whiskers extending to the minimum and maximum values of the data. Individual data points are overlaid on the box plots as small circles. The red group shows a median around 25, with most data points clustered between 10 and 40. The teal group shows a median around 65, with data points ranging from approximately 30 to 95. The teal group exhibits a wider spread of data points, particularly in the upper range, compared to the red group.

This box plot compares two groups, represented by red and cyan colors. The red group (left) has a median around 40, with a box spanning from approximately 25 to 55. The cyan group (right) has a median around 65, with a box spanning from approximately 50 to 80. Both groups show significant outliers, with the red group having several points below the lower whisker and the cyan group having several points above the upper whisker.

Box plot showing the distribution of the number of visits per month for 15 patients. The y-axis represents the number of visits, ranging from 250,000 to 1,250,000. The box plot is red with a black outline. The median is at approximately 600,000. The interquartile range (IQR) is from approximately 550,000 to 950,000. Whiskers extend from approximately 250,000 to 1,200,000. Outliers are shown as red circles with black outlines.

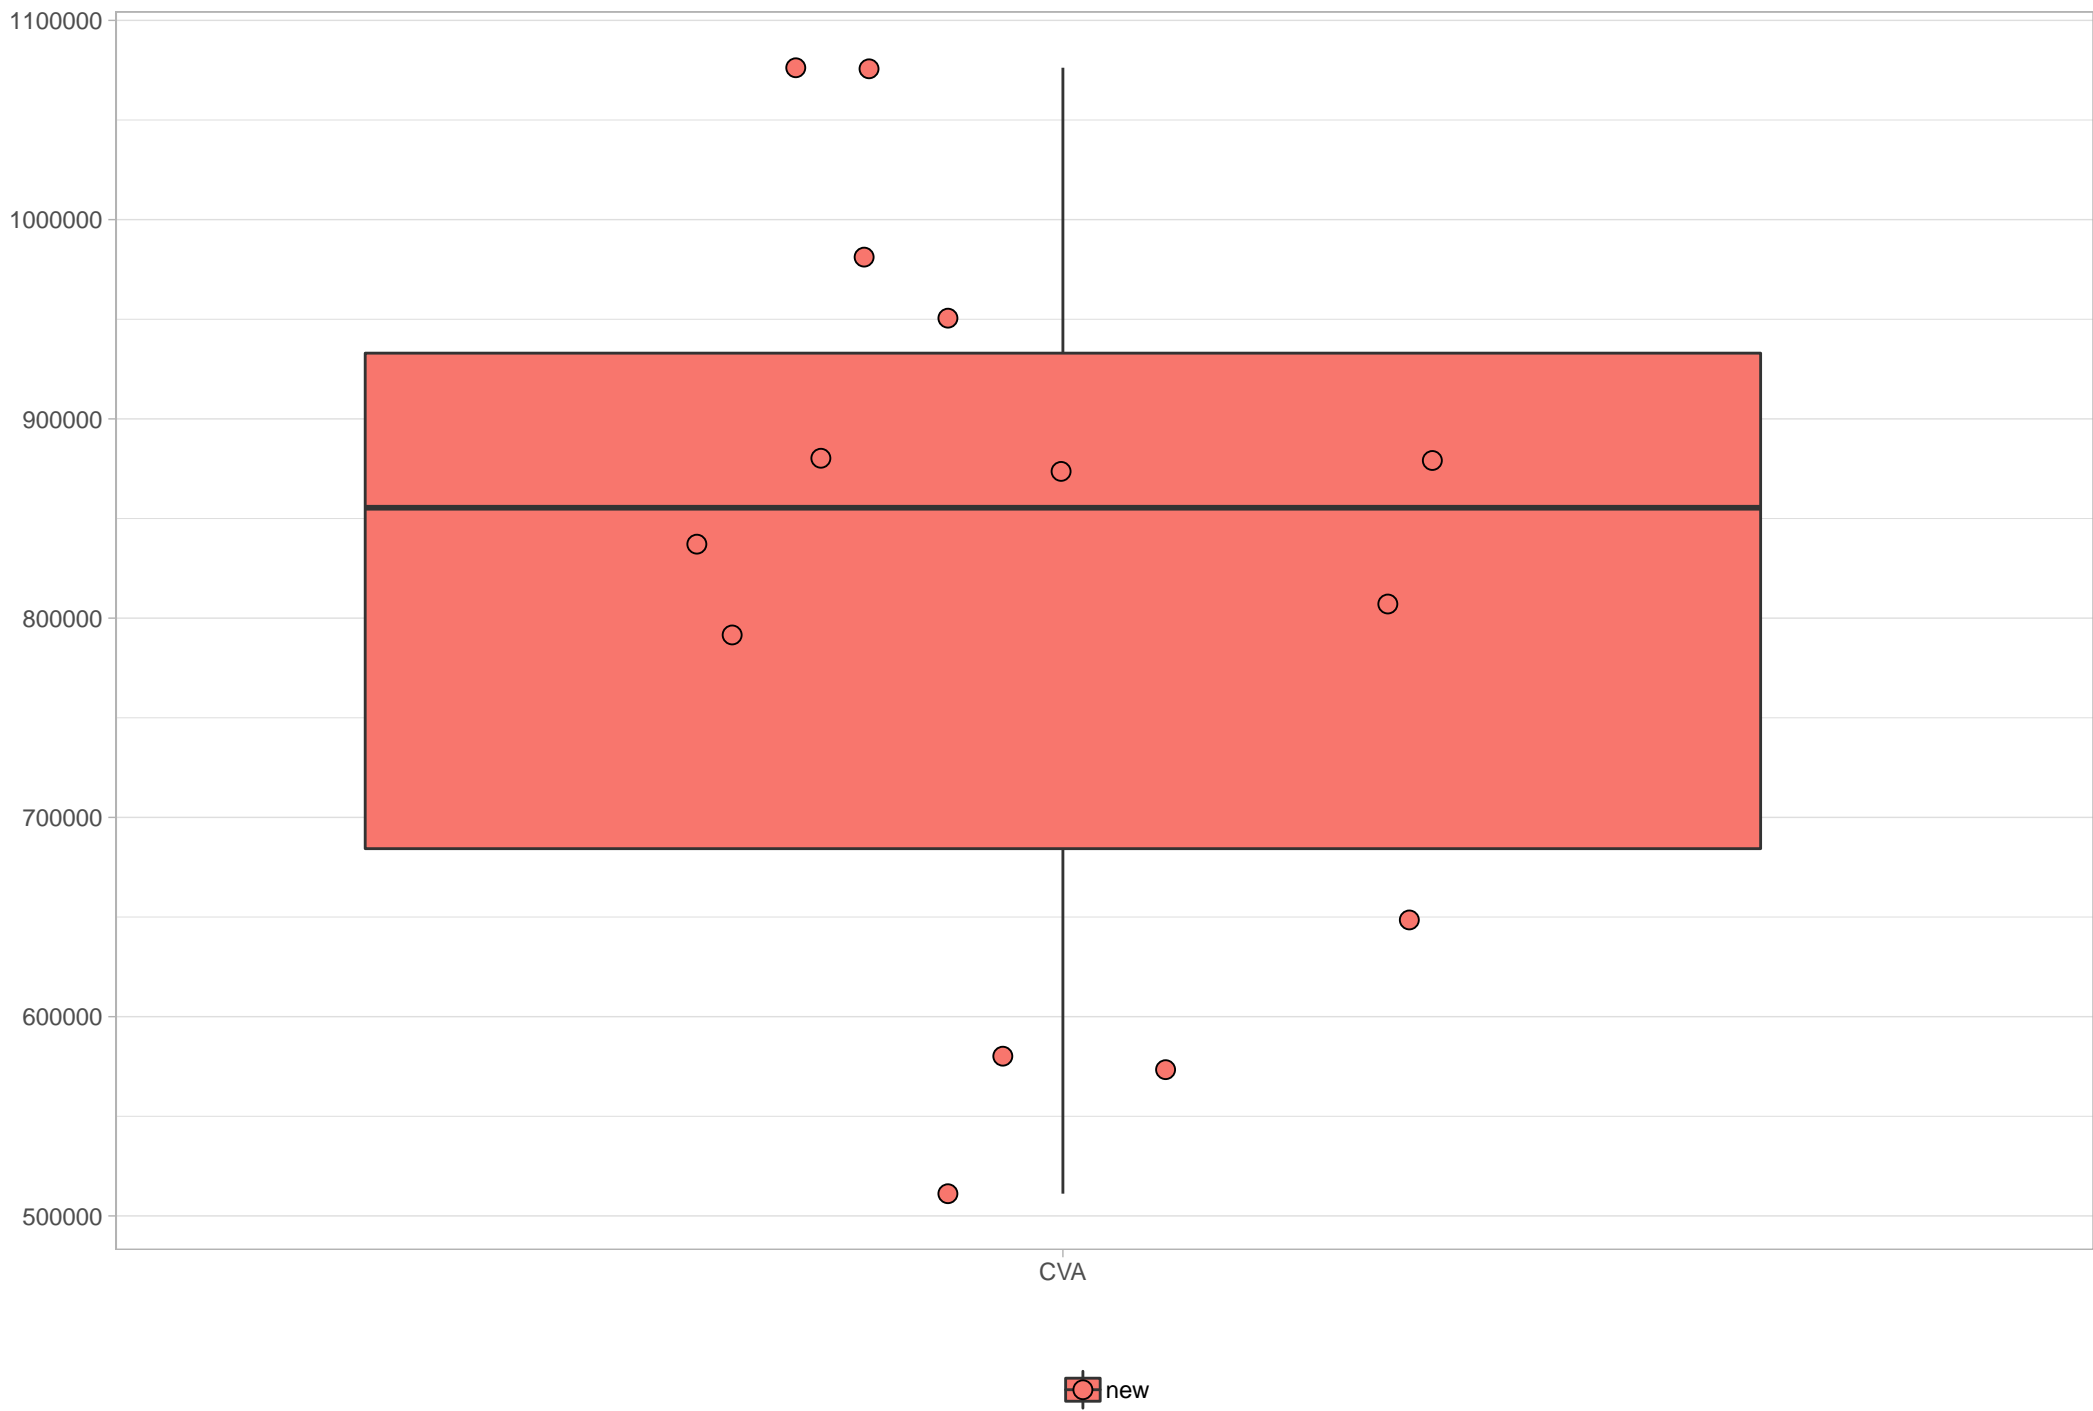

Statistic	Value (Approximate)
Minimum (Lower Whisker)	250,000
First Quartile (Q1)	550,000
Median	600,000
Third Quartile (Q3)	950,000
Maximum (Upper Whisker)	1,200,000
Outliers	220,000, 520,000, 550,000, 580,000, 620,000, 780,000, 1,000,000, 1,200,000
